DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Kolb et al. U.S. Patent 6,045,937.

Kolb teaches an electrochemical cell, wherein the cell includes a controlled electrode surface comprising an electrode with a carbonaceous surface, an electrolyte and reduced additive (abstract). The reduced additive is formulated from an additive which is either soluble or insoluble in the solvated electrolyte prior to reduction (claims 5,6 11,12 & 17,18). See the abstract. The invention further includes a passivating layer at the carbonaceous electrode-electrolyte interface causing the additive to substantially prevent gas formation within the cell, which would otherwise result from decomposition of the solvent upon contact with the carbonaceous surface (abstract, claims 2,8 & 14). The additive also increases the first cycle coulombic efficiency relative to the cell without the additive (col. 3, lines 60-68, claims 3,4, 9,10 & 15-16). The additive is included in an electrolyte solvent including propylene carbonate and ethylene carbonate (col. 4, lines

45-55). The additive inherently has a molecular weight of at least 105 and is represented by the formulas:

meeting the additive structures of claims 1,7 and 13. Therefore, the instant claims are anticipated by Kolb.
